

The **EU-funded BEAMitup** project proposes a platform that provides rapid DNA screening, developed and patented by SwissDe Code, certifying the presence of pathogens or identifying pork in beef meat in just 30 minutes.

Picture of machine that analyses food

## OUR CONTRIBUTION

We made available to them a server in which the rice's DNA sequencing data was sent, which we analyzed using a data science algorithm to verify its quality and provenance in order to certify the Basmati designation and the absence of contaminants.
